

GENERIC DRUGS

Antibiotic and sedative gain generic versions

With the new generic options, the cost to purchase the drugs will be more affordable.

Anvisa published this last Monday (12/6), the registry of two generic drugs unpublished: the generic maleate of levomepromazine and the generic limeciclina. Under the generic law, such drugs must enter the market with a value at least 35% lower than the value of the reference product.

What is levomepromazine maleate for?

The new generic acts in the Central Nervous System (CNS) through its antidopaminergic property (which inhibits excessive stimulation of the CNS). Levomepromazine maleate is a drug whose expected action is sedation and the improvement of mental pictures, such as anxiety in psychotic patients.

The generic levomepromazine maleate 100 mg coated tablets, whose reference medicine is Neozine, was registered by the company Hipolabor Farmacêutica Ltda.

What is lymcycline used for?

Indication of lymidinecyclyne is given for the treatment of tetracycline-sensitive infections. In dermatology, the product is indicated for the treatment of acne vulgaris and rosacea. It is even an effective antibiotic against sensitive microorganisms.

The generic limeicline hard capsules of 150 and 300 mg, whose reference medicine is Tetralysal, was registered by the company EMS S / A.

Check the publication of the registry of both generics in the Official Gazette (DOU) this Monday (12/6).
