Twenty-two batches of the drug Haldol (haloperidol) were suspended on Monday (22/5) due to labeling errors. The suspended lots had the pediatric indication on the label, which is incorrect. The medicine Haldol Injection is for adults only.

The product is used to treat psychotic cases in patients with schizophrenia. The error was identified by the manufacturer, Janssen-Cilag Farmacêutica, and communicated to Anvisa. The suspension reaches the Haldol (haloperidol) infetable, 5mg / mL. It is now up to the manufacturer to make the recall of the product on the market.

Check the suspended lots:
