

WE WORK WITH YOUR **FUTURE** IN MIND

DRY POWDER INHALATION

As a leader in the field of Inhalation, DFE pharma offers the pharmaceutical industry the most optimal solution for the development of their Dry Powder Inhalation (DPI) drug. DFE pharma is a partner for pharmaceutical companies developing drugs for pulmonary delivery for many years. We offer a wide range of standard products, plus the option to customize our products to meet your specific needs.

ORAL SOLID DOSE

Most medicines, from over the counter treatments to prescription drugs, are taken by mouth in the form of tablets and capsules. Oral medicines are convenient, flexible and cost-effective. They can be produced in large numbers very fast (production rates of 1 million per hour can be achieved). Variants that are precisely suited to individual preferences and needs can easily be developed.

Global leader in excipient solutions

We develop, produce and supply excipients for use in **oral solid dose** and **dry powder inhalation**, but as a supplier of complete solutions we do a lot more than that. We work closely with pharmaceutical companies around the world, collaborating in original research, supporting their go to market strategies and fine-tuning our products to ensure that their medicines deliver exactly the right outcomes for patients.

That makes us more than just a supplier. We are recognised as a true partner to the pharmaceutical industry in helping people round the world lead healthier lives.
