

Generic API Manufacturing

Our goal is simple, yet challenging, and it is the core value our to at Kalintis. We want to contribute smart and strong efforts to develop new and non-infringing synthetic routes for our Pharmaceutical Intermediates and Active Pharmaceutical Ingredients. Kalintis methodology strongly emphasizes R&D, which can develop a commercial life. Our team is focused on developing the most practical techniques that give our partners an advantage in a competitive global market. We have the capability to start development from Gram-Kilogram Scale, Pilot Scale, and transfer technology to Commercial Scale.

Kalintis is interested in creating lasting footprints with our DMF filings, which enable us to support our partners for their respective Abbreviated New Drug Application. We know that, in order to best support our partners, we must have quality systems from operations to documentation.

Our pipeline is a derivative of the relationships we have developed overtime, and through consistency. We hope to evolve our pipeline with the past, present, and future demands of a changing world.
