MOTTO SYSTEMS

Services

Motto's common approach to software development and maintenance is an extensive set of process and practice guidance that drives our employees toward continuous process improvement, for more reliable and higher-quality delivery of software products and services to our customers. In addition, Motto's common approach incorporates implementation and tailoring guidance facilitating our close relationships with our clients. Our main focus areas are product development / project based application development and branding services.
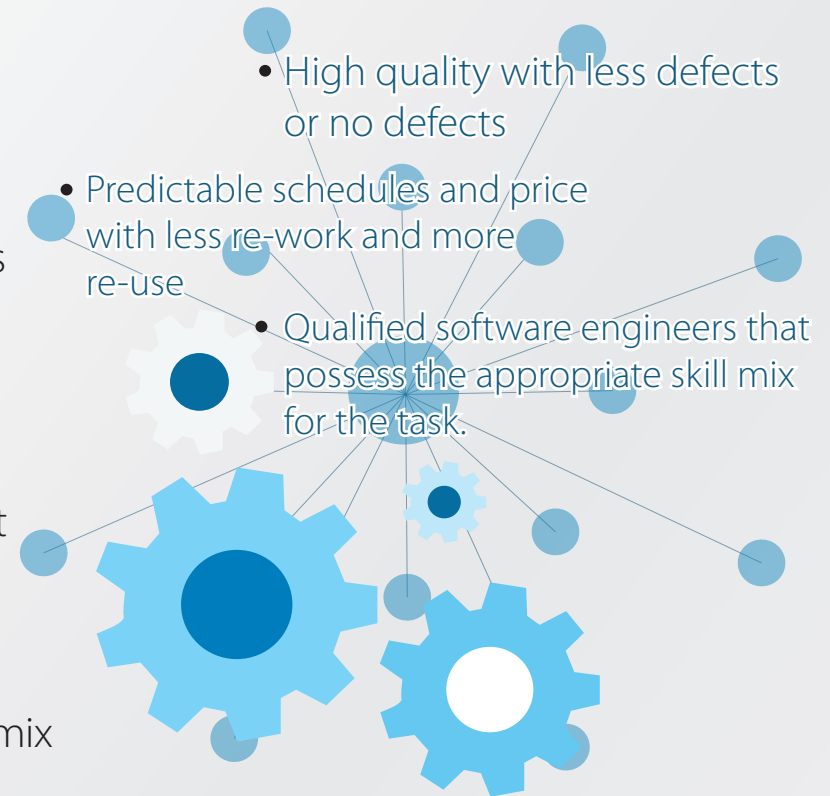

We offer our clients the right ingredients - "best practices" approach founded upon leading industry standards - the right mix of skilled engineers and business analysts - and the technology know-how.

- High quality with less defects or no defects
- Predictable schedules and price with less re-work and more re-use
- Qualified software engineers that possess the appropriate skill mix for the task.

Software Development

Motto provides high quality software development services for all clients with a focus on development and integration of software systems based on client requirements.

Product Development

Customized software can be made to do exactly what you want and doesn't confuse the user with irrelevant options. This can produce considerable longterm benefits to clients.

Construction
Fabrication & Erection
MIS

The construction industry faces growing challenges of ensuring accurate and regular flow of information, like inventory data, transportation schedules, work rosters, delivery timetables, and so on, between construction company headquarters and construction sites, all the more wherein landline communications might be unavailable or unreliable.

It's here Motto's construction solutions can play a vital role. Our solution can bring about effective integration of multiple data systems extending back-office systems to front-end clients.

This enables construction workers and managers to smoothly access and consolidate mission-critical information within a single unified interface directly from the construction site. This in turn improves construction & engineering work processes, reduce errors, improve cost-efficiency, and increase collaboration with customers.

Key Features

- *Comprehensive inventory management*
- *Quick analysis of data from various systems*
- *Better informed decision making*
- *Increased productivity and streamlined working processes*
- *Increased return on investment (ROI) from existing applications*
- *Ability to access and update key data from remote locations*

Clients

Sampling form over 350 clients that we worked for.
