

Coated Softgels For Consumer Health Products Improves Product Performance And Enhances Consumer Experience

Coated softgels such as enteric, delayed release and fixed dose combinations are an ideal solution for protecting the active ingredients from the harsh acidic environment of the stomach, protecting the stomach from irritating effects of certain drugs, or for co-delivery of 2 or more drugs in order to optimize product efficacy and stability. Our softgel coating capabilities offer multiple advantages over other technologies, such as:

- No risk of film coating interfering with the sealing process
- Increased robustness of the products
- Improved flexibility in the release profile of the active ingredient
- Backed by extensive softgel formulation, process development and manufacturing expertise

Renejix has the unique advantage of offering integrated softgel manufacturing and coating capabilities within our network to bring your product faster to market. This integrated approach minimizes the time between encapsulation and coating to

- Enhance product quality and efficacy
- Increase shelf life of the product
- Reduce supply lead time and safety stock

VMS Categories fit for delayed release coating

Fish oils and other odoriferous oils

Minerals, Botanicals and other gastric irritating compounds

Enzymes and acid-sensitive nutritional supplements

Garlic and odoriferous volatile compounds

Sulphurated compounds and low density nutrients
