

Sodium Hyaluronate

Hyaluronic acid is a glycosaminoglycan and long-chain polymer of disaccharide units of Na-glucuronate-N-acetylglucosamine and widely exists in all kinds of interstitial substances. In 1934, the hyaluronic acid was separated from bull's eyes by Meyer in USA. In the early years, hyaluronic acid was mainly extracted from the umbilical cords and cock's combs, but now it's by microbial fermentation...

Sulglycotide

It's a kind of semisynthetic glycopeptide polysulfate by sulfating of glycopeptides extracted from pig duodenum. It has many bioactivities of mucopolysaccharides such as anti-tumor, anti-virus, anti-atherosclerosis, reducing blood lipids and so on. It has the distinctive curative effects for peptic ulcer and widely used for the clinical treatment of gastric and intestinal mucositis because of its strong activity of anti-peptic ulcer...

Alpha-Arbutin

This product is manufactured of single α -configuration by biotransformation and the purity is more than 99.5%. As the skin lightening active substance from natural plant, alpha-Arbutin could rapidly permeate into skin, inhibit the activity of tyrosinase effectively and block the formation of melanin without interrupting the cell proliferation concentration. By combination of tyrosinase and itself, it could accelerate the decomposability and excretion to reduce the skin pigment deposition and eliminate stains and freckles. Alpha-Arbutin is considered one of the most effective and safe lightening ingredients in foreign countries and the most competitive lightening spot removal active substance in 21st century...
