

UniTrace™

Is your supply chain secure?

Leading brands around the world are faced with complex serialization challenges in response to varied legislation. A critical part of compliance is the generation, management, exchange and reporting of serialization data within the ecosystem of trading partners and regulatory bodies.

Systech UniTrace™ is an enterprise cloud based platform that enables manufacturers to track and trace product through the supply chain while meeting compliance requirements. Enabling brands to serialize, and manufacturers to track product through the supply chain, Systech's solutions future-proof serialization by providing the capability to add and adapt to the latest in regulatory changes and authentication technology.

UniTrace cloud-based serialization and authentication solutions help manufacturers prove traceability through the full supply chain, while providing compliance and regulatory reporting.

Easy to Implement

Deployed on a secure cloud, UniTrace enables end to end supply chain tracking from point of manufacture to point of dispensation. Full supply chain support of CMO/CPO operations, distributors, 3PLs, and more. Systech's full suite of authentication and serialization solutions, UniSecure™ and UniSeries™, is an established, low-risk, secure system trusted by leading manufacturers around the globe.

Flexible, rules-based processing allows for simplified configuration and implementation. GS1-compliant EPCIS communication protocols promote easy integration with premise-based serialization systems and enable full operation services with trading partners.

FEATURES

- Serial Number Management
- End to End Supply Chain Tracking
- Market Compliance Ready
 - DSCSA
 - EU
 - Brazil ANVISA
 - CFDA
 - Turkey MOH
 - Korea
 - Saudi Arabia
 - Argentina
- EPCIS 1.1 Compliant
- EPCIS Event Repository
- Advanced CMO/CPO Connection Manager
- 3rd Party Serialization Data Exchange
- Full Rework Operations Suite
- Seamless SAP Integration
- Robust Security
- Traceability Simulator

Platform Functionality

The Systech UniTrace platform offers an ANSI/ISA-95 Level 4 Serialization and Traceability infrastructure, including:

- Serial number generation and management**
 Upload serialized lists or generate serial numbers in any of the formats currently required by regulatory bodies across the world. UniTrace supports the full suite of GS1 number formats and is capable of advanced randomized number generation.
- EPCIS event repository**
 Robust processing of both inbound and outbound EPCIS messaging across a customer's partner network. Enables full end to end supply chain tracking.
- 3rd party serialization data exchange**
 Ease of integration into 3rd party manufacturing sites and supply chain partners.
- CMO/CPO Connection Manager**
 Easily connect contract packager sites to clients with standard, easy to deploy connectors greatly reducing integration costs and delivering high level security.
- Compliance gateway**
 Facilitates compliance with track-and-trace requirements as well as other regulatory reporting needs (e.g. USA DSCSA, China CFDA, Turkish Ministry of Health and more).
- Traceability**
 Web-based portal provides instant verification of product as it moves through the supply chain and, combined with Geotrack capability, allows for the collection of location intelligence.
- Supply-chain rework**
 Web-based warehousing application interface offers rework capabilities that allow for the processing of serialized goods after they leave the packaging line for business steps such as goods receipt, pick/pack/ship, unpack, decommissioning, label printing, and more.

Scalable, Pay as You Go

UniTrace delivers scalability, performance and uptime. With a pay-for-usage system, customers benefit from affordable, globally-accessible data storage solutions unique to their projects, regardless of the scale of deployment.

World Class Security

Systech's solution combines physical security, application-based security, and role-based, advanced Identity and Access Management (IAM) tools with Secure Socket Layer (SSL/TLS) communications sessions and 256-bit Advanced Encryption Standards (AES), ensuring every device, user and data is valid. This solution is deployed in a highly accessible environment with multiple levels of user restrictions and redundancy in secure data center facilities.

Driving Value from Traceability

UniTrace's primary function is to enable customers to achieve regulatory supply chain compliance by driving tangible benefits from the platform, and monitoring product diversion and enabling brand protection.
