

LEAN SIX SIGMA SUPPORT FOR PHARMACEUTICALS

NDA Consultants Add Value Globally by:

- Developing and Implementing Supply Chain Strategies
- Improving Manufacturing and Business Processes
- Driving Quality and Compliance
- Establishing Advanced Manufacturing Capability
- Managing Clinical Supplies
- Making Change Happen

As an International Consultancy, we deliver innovative solutions around the world to the pharmaceutical and biotech manufacturing sector.

Every one of our team of consultants is a leader in their field with more than 20 years of industry experience, so we understand the issues and challenges you face.

We pride ourselves in providing flexible and cost effective support to our clients, irrespective of the size of their organization and challenges.

LEAN SIX SIGMA

NDA Consultants provide consultancy, training and hands-on support to pharmaceutical companies' leaders, management and their workforces looking to drive improvements through the implementation of Lean and Six Sigma principles and techniques.

Our consultants have years of experience of helping pharmaceutical organizations develop Lean and Six Sigma into a business strategy in both development and manufacturing operations as well as across the global Supply Chain. We can assist you in accelerating the implementation of your program through :

- providing an external analysis and recommendations on the current status and potential gains of your Lean and Six Sigma deployment,
- leading workshops and training events, and providing ongoing implementation and project support,
- developing a structured approach to implementing the cultural and people changes necessary to ensure that your business improvements endure in time,
- working closely with your team as well as your customers and suppliers to build the "Lean Supply Chain".

AREAS OF COMPETENCE

DEVELOPMENT

Improving Time to Market through reducing the waste and variation in development processes and using LSS tools to ensure “quality by design”.

LABORATORY

Enhancing laboratory efficiency by increasing sample throughput and optimizing utilization of technical and human resources.

OPERATIONS

Optimizing process capability and driving non-added-value activities out of operations to improve service, cost and quality.

LOGISTICS AND SUPPLY CHAIN

Supporting process improvements within your external manufacturing base, your key suppliers, and your distribution networks.

ADMINISTRATIVE AND SUPPORT PROCESSES

Driving efficiencies into non-production processes (regulatory, engineering, HR, finance) and ensuring their alignment to value stream objectives.

A key element of our approach is the combination of the use of Lean and Six Sigma techniques and an emphasis on providing the necessary behavioural support.
