

**Cetyl ethylhexanoate**

A synthetic ester of cetyl alcohol and 2-ethylhexanoic acid. Comes in the form of a pale yellow wax/liquid.

Works as an emollient, skin conditioner and thickening agent. It lubricates the surface of the skin/hair, removes the appearance of dry patches and flakes and gives the skin a soft and smooth look. It gives cosmetic products water-repelling properties and an easy spreadability. It's used as a substitute to Spermaceti wax, which comes from whales. You can find this ingredient in products such as lipstick, foundation, facial moisturizer, lip gloss, anti-aging treatment, lip/eye liner, conditioner and eye shadow.
