

XC002

XC002 – Discovery stage. XC002 is the second XyloCor program and it is being developed for regeneration of cardiac tissue in patients who have poorly functioning hearts as a result of past heart attacks and resulting heart failure. XC002 has transformed non-functioning cardiac cells into function cardiac cells in animal models.

XyloCor Therapeutics is a biopharmaceutical company focused on the development of novel gene therapy for unmet needs in advanced coronary artery disease. In the United States, coronary artery disease is a leading cause of death and disability. Our lead product candidate, XC001, is in clinical development for patients with refractory angina for which there are no treatment options. XyloCor also has a secondary product, XC002, in discovery stage, for patients with cardiac tissue damage from heart attacks.

Improve the lives of people who struggle with daily activities due to cardiovascular disease through our commitment to advancing the science of gene therapy.
